X933 SERIES INDOR MONITOR Administrator Guide

Version: 2.0 | Date: April.2021

About This Manual

Thank you for choosing the Akuvox X933 series indoor monitor. This manual is intended for the administrators who need to properly configure the indoor monitor. This manual applies to the 933.255.1.19 version, and it provides all the configurations for the functions and features of the X933 series door phone. Please visit the Akuvox forum or consult technical support for any new information or the latest firmware.

Introduction of Icons and Symbols

- Warning:
- Always abide by this information in order to prevent the persons from injury.

Caution:

• Always abide by this information in order to prevent the damages to the device.

Note:

• Informative information and advice from the efficient use of the device.

Tip:

• Useful information for the quick and efficient use of the device.

1. Product Overview

X933 series is an Android SIP-based with a smooth touch-screen indoor monitor. It can be connected with the Akuvox door phone for audio/video communication, unlocking, and monitoring.Residents can communicate with visitors via audio/video call, and it supports unlocking the door remotely. It is more convenient and safer for residents to check the visitor's identity through its video preview function. X933 series are often applied to scenarios such as villas, apartments, and buildings.

2. Change Log

The change log will be updated here along with the changes in the new software version.

4. Introduction to Configuration Menu

Status: This section gives you basic information such as product information, Network Information, and account information, etc.

Account: This section concerns SIP account, SIP server, proxy server, transport protocol type, audio&video codec, DTMF, session timer, etc.

Network: This section mainly deals with DHCP&Static IP setting, RTP port setting, and device deployment, etc.

Phone: This section includes Time&language, call feature, dial management, data import&export, door log, web relay.

Contacts: This section allows the user to configure the local contact list store in the device.

Upgrade: This section covers Firmware upgrade, device reset&reboot, configuration file auto-provisioning, PCAP.

Security: This section is for Password modification, account status & session time out configuration, as well as service location switching.

Settings: This section is including the RTSPD & voice assistance set up.

Arming: This section covers the configuration including, arming zone setting, arming mode, disarm code, and alarm action.

• Mode selection:

Discovery mode: It is a plug and plays configuration mode. Akuvox devices will configure themselves automatically when users power on the devices and connect them to the network. It is super time-saving mode and it will greatly bring users convenience by reducing manual operations. This mode requires no prior configurations previously by the administrator.

Cloud mode: Akuvox SmartPlus is an all-in-one management system. Akuvox SmartPlus is the mobile service that allows audio, video, remote access control between smartphones and Akuvox intercoms. All configurations in the device will be issued automatically from the cloud. If

Akuvox Smart

users decide to use Akuvox SmartPlus, please contact Akuvox technical support, and they will help you configure the related settings before using them.

SDMC mode: SDMC (**SIP Device Management Controller**) is a simple and comprehensive software for building management. It provides a topography for a community while offering you a graphical configuration interface for the door access, intercom, monitoring, alarm, etc. It is a convenient tool for property managers to manage, operate, and maintain the community.

• Tool selection

Akuvox has many configuration tools for you to set up devices more conveniently. Here we list some common tools, please contact your administrator to get the tool if you need them.

- 1. **SDMC**: SDMC is suitable for the management of Akuvox devices in large communities, including access control, resident information, remote device control, etc.
- 2. **Akuvox Upgrade tool**: upgrade Akuvox devices in batch on a LAN(**Local Area Network**)
- 3. Akuvox PC Manager: distribute all configuration items in batch on a LAN.
- 4. **IP scanner**: it is used to search Akuvox device IP addresses on a LAN.
- 5. **FacePro**: manage face data in batch for the door phone on a LAN.

15

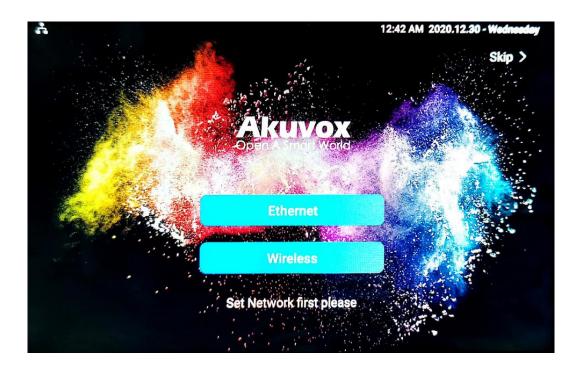

5. Access the Device

Akuvox indoor monitor system settings can be either accessed on the device directly or on the device web interface.

5.1. Device Start-up Network Selection

Akuvox indoor monitor system settings can be either accessed on the device directly or on the device's web interface. After the device boots up initially, you are required to select the network connection for the device. You can either select ethernet or wireless network connection according to your need.

 Note:
 Please refer to the chapter on Network Setting&Other connection for the configuration of the Ethernet and wireless network connection.

5.2. Accessing the Device Setting on the Device

5.2.1. Accessing Device Basic Setting.

You can access the device's basic setting and advance setting where you can configure different types of functions as needed. To access the device

basic setting by pressing **Setting** icon **D**. To checking the basic information like MAC, firmware and ect.

5.2.2. Accessing Device Advanced Setting

To access the advanced setting, press **Setting** then press **Advanced Settings** icon. Press password 123456 to enter the advanced setting.

Tip:

 You can also obtain the device IP address using the Akuvox IP scanner to log in the device web interface. Please refer to the URL below for the IP scanner application:

http://wiki.akuvox.com/doku.php?id=tool:ip_scanner&s[]=ip&s[] =scanner

Note:

- Google Chrome browser is strongly recommended.
- The Initial user name and password are "**admin**" and please be case-sensitive to the user names and passwords entered.

6. Language and Time Setting

6.1. Language Setting

When you first set up the device, you might need to set the language to your need or you can do it later if needed. And the language can either be set up directly on the device or on the device web interface according to your preference.

6.1.1. Language Setting on the Device

Language setting can be configured on the device and on the device web interface that allows you to select or change the language for screen display to your preference. To configure the language display on the device **Setting > Time&Language** screen.

å		07:57 AM 2021.02.04 - Thursday
< Setting

6.2. Time Setting

Time setting can be set up on the device and on the device web interface in terms of time zone, date and time format etc.

6.2.1.Time Setting on the Device

To set up time setting on the device **Settings > Time&Language** screen.

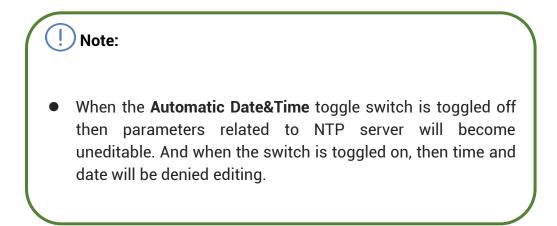

Parameter Set-up:

- Automatic Date: automatic Date is switched on by default, which allows the date& time to be automatically set up and synchronized with the default time zone and the NTP server (Network Time Protocol). You can also set it up manually by checking off the square box and then enter the time and date you want and press the Save tab to save the setting.
- **Time Zone:** select the specific time zone depending on where the device is used. The default time zone is GMT+0.00.
- Date Format: select the date format as you like among the three format options. The three formal options are Y-M-D, Y/M/D, D-M-Y, D/M/Y, M-D-Y, M/D/Y.

23

- **Time Format:** select 12 hour or 24 hour time format as you like.
- NTP Server: enter the NTP server you obtained in the NTP server field.

6.2.2.Time Setting on the Device Web Interface

Time setting on the web **Phone >Time** interface also allows you to set up the NTP server address that you obtained to automatically synchronize your time and date. And when your time zone is selected, the device will automatically notify the NTP server of its time zone so that the NTP server can synchronize the time zone setting in your device.

7. Screen Display Configuration

X933 series indoor monitor allow you to enjoy a variety of screen displays to enrich your visual and operational experience through the customized setting to your preference.

7.1. Screen Display setting on the Device

You can configure a variety of features of the screen display in terms of brightness, screen saver and font size, etc. To do this configuration on device **Setting > Display** screen.

÷			01:08 AM 2020.12.30 - Wednesday
<	Settings		✓ Save
•	System Info	Screen Saver	
	Display	Screen Saver Type	Local Pictures >
	Sound	Screen Lock	
3	Time& Language	Screen Clean	
	DND	Font Size	Normal >
ە	Call Feature	Breathing Light	
*	Bluetooth	Wallpaper	

Parameter set-up:

- **Brightness:** press on the brightness setting and move the yellow dots to adjust the screen brightness. The default brightness is "145".
- Sleep Time: set the timing for the device screen to be turned off. You can select the timing among eight options: 15 seconds, 30 seconds, 1 minute, 2 minutes, 5 minutes, 10 minutes, 30 minutes, 1 hour. For example, if you set it as 1 minute then the screen will be turned off if there is no operation on the device for 1 minute. However, if you turn on the function, then the device screen will not be turned off until screen saver display reaches its configured time duration.
- Screen Saver Lock Time: set the time duration for the screen saver among 4 options: 30 minutes, 1 hour, 2 hours, Never. for example, if select Never then the screen saver will stay permanently on.
- Screen Saver: tick the square box to enable the screen saver function.

• Screen Saver Type: select screen saver type among seven options: SDMC AKUVOX SMART INTERCOM www.akuvox.com 26

Pictures, **Local Pictures**, **SDMC+Local Pictures**, **SDMC Videos**, **Local Videos**, **SDMC+Local Videos**, **Clock**. Details for the screen saver types are shown below:

NO	Screen Saver Type	Type Description
1	SDMC Pictures	Display pictures from SDMC as the screen saver.
2	Local Pictures	Display picture uploaded to the indoor monitor as the screen saver.
3	SDMC+Loca l Pictures	Display pictures from SDMC and the indoor monitor in rotation as the screen saver.
4	SDMC Videos	Display videos from SDMC as the screen saver.
5	Local Videos	Display videos from the indoor monitor as the screen saver
6	SDMC+Loca I Videos	Display videos from SDMC and the door phone in rotation as the screen saver.
7	Clock	Display the clock as the screen saver.

- Screen Lock: tick the screen lock if you want to lock the screen after the screen is turned off (turn dark). You are required to enter the system code to unlock the screen or you can unlock the screen by facial recognition.
- Screen Clean: press on Screen clean feature first before you start wiping the screen clean. And this helps you avoid unwanted changes in the settings incurred while you are wiping the screen.
- Font Size: select the font size among four options "Small", "Normal"," Large"," Huge" according to your need.

28

- **Breathing Light:** move the toggle switch to enable the breathing light.
- Wallpaper: click to select the local wallpaper.

7.2. Screen Display Setting on the Web Interface

X933 series indoor monitor allows you to enjoy a variety of screen displays to enrich your visual and operational experience through the customized setting to your preference.

7.2.1. Upload Screen Saver

You can upload screen saver pictures separately or in batch to the device and to the device web **Phone > Display Setting > Screen Saver Setting** interface for a public purpose or for a greater visual experience.

Screen Saver Pictures	E Import		
Screen Saver Videos	Import (?)		
Picture Files	2 (5).JPG	•	Delete 📀

9. Phone Book Configuration

9.1. Phone Book Configuration on the Device

You can configure the contacts list in terms of adding and modifying contact groups or contacts on the device **Contact > Local PhoneBook** directly.

9.1.1.Add contact

Akuvox Smart Intercom

X933 Administrator Guide

37

4	1000	05:52 AM 2021.04.21 - Wednesday
< New Contact		
	2	
	Account1 >	
	New Contact Name	10 C
	Number	
	CameraUrl	
	Cancel	Confirm

Parameter Set-up:

- Account1: select which account to use to dial out, Account 1 or Account 2.
- New Contact Name: enter the name to save.
- **Number**: enter the IP or SIP number to save.
- **CameraUrl**: enter the RTSP URL for video preview.

 Akuvox devices RTSP URL format is rtsp://device IP/live/ch00_0. if you use the third party device, please confirm the URL format with their company.

9.1.2.Edit Contact

You can check and edit the exited contacts in the phonebook list. Choose one and click **Edit** key to modify.

9.1.3.Block List setting on the device

Choose which contact on the contact list you want to be added to the blocklist.

10. Network Setting & Other Connection

10.1.Device Network Configuration

You can check for the door phone's network connection info and configure the default DHCP mode (**Dynamic Host Configuration Protocol**) and static IP connection for the device either on the device or on the device web interface.

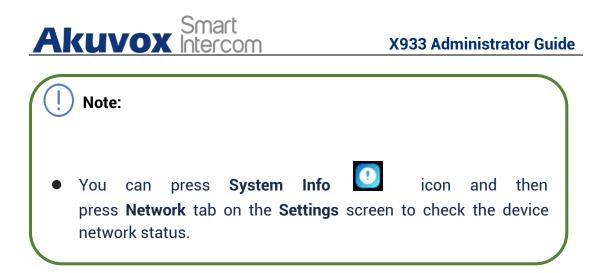

10.1.1. Configuring Device Network Connection on the Device

To check and configure the network connection on the device **Settings** > **Advance Settings** screen.

- DHCP: select the DHCP mode by moving the toggle switch to the right. DHCP mode is the default network connection. If the DHCP mode is turned on, then the door phone will be assigned by the DHCP server with IP address, subnet mask, default gateway, and DNS server address automatically.
- **Static IP**: select the static IP mode by checking off the DHCP check box. When static IP mode is selected, then the IP address, subnet mask, default gateway, and DNS servers address have to be manually configured according to your actual network environment.
- **IP Address**: set up the IP Address if the static IP mode is selected.
- **Subnet Mask**: set up the subnet Mask according to your actual network environment.
- **Default Gateway**: set up the correct gateway default gateway according to the IP address of the default gateway.
- **Preferred&Alternate DNS Server**: set up preferred or alternate DNS Server (**Domain Name Server**) according to your actual network environment. Preferred DNS server is the primary DNS server address while the alternate DNS server is the secondary server address and the door phone will connects to the alternate server when the primary DNS server is unavailable.

10.1.2. Configuring Device Network Connection on the Web Interface

To check the network on the web **Status > Network information** interface.

LAN Port TypeDHCP AutoLink StatusConnectedIP Address192.168.35.120Subnet Mask255.255.255.0GateWay192.168.35.1Preferred DNS218.85.157.99	Network Information ⑦			
IP Address 192 188 35 120 Subnet Mask 255 255 265 0 GateWay 192 168 35 1 Preferred DNS 218 85 157.99		LAN Port Type	DHCP Auto	
Subnet Mask 255 255 255 0 GateWay 192 168 35 1 Preferred DNS 218 85 157 .99		Link Status	Connected	
GateWay 192.168.35.1 Preferred DNS 218.85.157.99		IP Address	192.168.35.120	
Preferred DNS 218.85.157.99		Subnet Mask	255.255.255.0	
		GateWay	192.168.35.1	
		Preferred DNS	218.85.157.99	
Alternate DNS 218.85.152.99		Alternate DNS	218.85.152.99	

To check and configure network connection on the device **web Network > Basic > LAN Port** interface.

Port 💿			
	Туре	O DHCP Static IP	0
	IP Address	192.168.35.120	0
	Subnet Mask	255.255.255.0	0
	Default Gateway	192.168.35.1	0
	Preferred DNS Server	218.85.157.99	0
	Alternate DNS Server	218.85.152.99	0

- **DHCP**: select the **DHCP** mode by checking the DHCP box. DHCP mode is the default network connection. If the DHCP mode is selected, then the indoor monitor will be assigned by the DHCP server with IP address, subnet mask, default gateway, and DNS servers address automatically.
- Static IP: select the Static IP mode by checking off the DHCP square box. When static IP mode is selected, then the IP address, subnet mask, default gateway, and DNS servers address have to be manually configured according to your actual network environment.
- IP Address: set up the IP address if the static IP mode is selected.
- **Subnet Mask**: set up the subnet mask according to your actual network environment.
- **Default Gateway**: set up the correct gateway default gateway according to the IP address of the default gateway.
- Preferred/Alternate DNS Server: set up DNS (Domain Name Server) according to your actual network environment. Preferred DNS Server is the primary DNS server address while the Alternate DNS Server is the secondary server address and the door phone connects to the alternate DNS server when the preferred DNS server is unavailable.

10.2.Device Deployment in Network

Akuvox X933 series indoor monitors should be deployed before they can be properly configured in the network environment in terms of their location, operation mode, address and extension numbers as opposed to other devices for device control and the convenience of the management. To deploy the device in the network on web **Network > Advanced > Connect Setting** interface.

Connect Setting ⑦		
Connect Mode	SDMC	0
Discovery Mode		0
Device Node	1 1 1	1 0
Device Extension	1	0
Device Location	Indoor Monitor	0

- Connect Mode: It is automatically set up according to the actual device connection with a specific server in the network such as SDMC or Cloud and None. None is the default factory setting indicating the device is not in any server type, therefore you are allowed to choose Cloud, SDMC in discovery mode.
- Discovery Mode: check to turn on the discovery mode of the device so that it can be discovered by other devices in the network, and uncheck if you want to conceal the device so as not to be discovered by other devices.
- **Device Node:** specify the device address by entering device location info from the left to the right: **Community, Unit, Stair, Floor, Room** in sequence.
- **Device extension**: enter the device extension number for the device you installed.

• **Device Location**: enter the location in which the device is installed and used.

10.3. Device NAT Setting

NAT (**Network Address Translation**) allows hosts in an organization's private intranet to transparently connect to hosts in the public domain. There is no need for internal hosts to have registered Internet addresses. It is a way to translate the internal private network IP address into a legal network IP address technology. To set up NAT, you can do it on web **Account > Advanced > NAT** interface.

UDP Keep Alive Messages C (5-60Sec) (7)	NAT ③		
UDP Alive Msg Interval 30 (5-60Sec) 7	UDP Keep Alive Messages		0
	UDP Alive Msg Interval	30	(5~60Sec) (?)
RPort Enabled 0	RPort Enabled		0

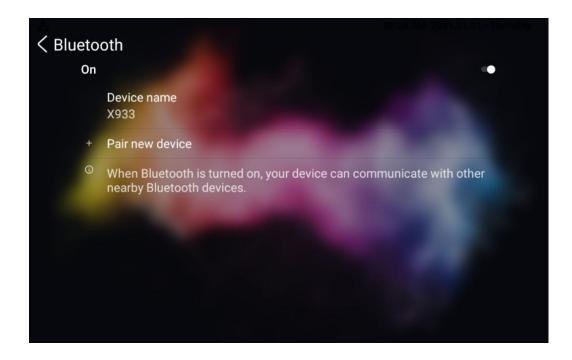

- UDP Keep Alive Messages: if checked, the device will send out the message to the SIP server so that SIP server will recognize if the device is in online status.
- **UDP Alive Msg Interval**: set the message sending time interval from 5-60 seconds, the default is 30 seconds.
- **RPort**: check the RPort when the SIP server is in WAN (Wide Area Network).

10.4. Device Bluetooth Setting

10.4.1. Device Bluetooth Pairing

After X933 series indoor monitors turn on the Bluetooth on the device **Setting > Bluetooth** screen, it can be paired with other device via Bluetooth.

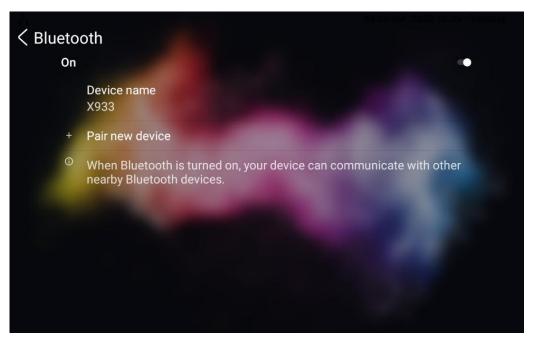

10.4.2. Device Bluetooth Data Transmission

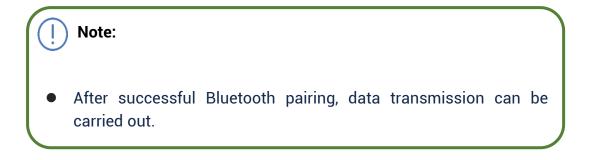

To transfer data via bluetooth by pressing **Pair new device**.

X933 Administrator Guide

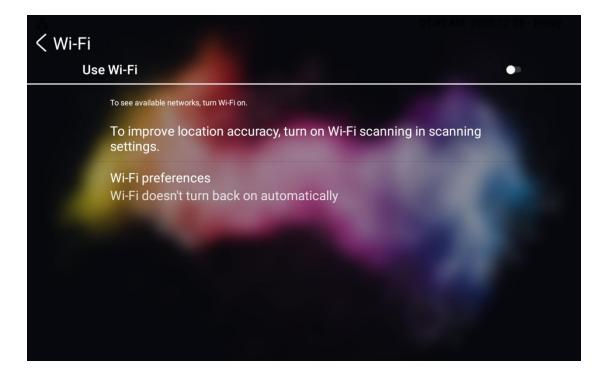

÷.				08	3:02 AM 2020.12.29 - Tuesday

10.5. Device Wi-Fi Setting

In addition to wired connection, the device also supports Wi-Fi connection. To set the Wi-Fi on device **Setting > Advance Setting** screen.

11. Intercom Call Configuration

11.1.IP call & IP Call Configuration

IP calls and SIP calls can be made directly on the intercom device by entering the IP number on the device. And you can also disable the direct IP call if you allow no IP call to be made on the device.

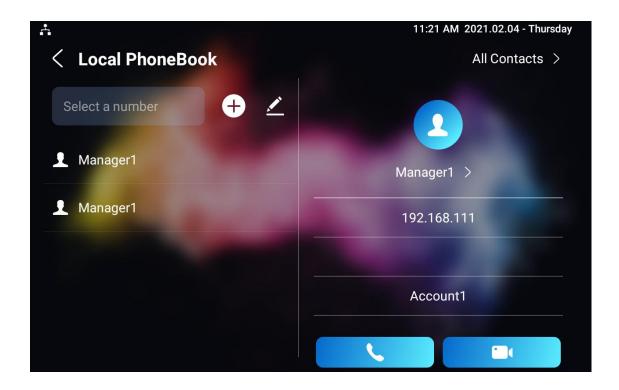

11.1.1. Make IP Calls

To make a directly IP call on the device **Call** screen. Enter the IP address you which to call on the soft keyboard, press **Audio** or **Video** tab to call out.

Å.			07:53 AM 2020.12.29 - 1	uesday
< Call				
Keypad	<pre>Account1 ></pre>	9 192.168	.35.111	
Call Logs	1	2	3	
Contacts	4	5	6	
	7	8	9	
		0	×	
	📞 Audio		™ ∢ Video	

In addition, you can also make IP calls on the **Local Phonebook** on your device.

11.1.2. IP Call Configuration

To configure the IP call feature and port on the device web **Phone > Call Feature > Others** interface.

Return Code When Refuse	486(Busy Here)	• 0
Auto Answer Delay	0	(0~30Sec)
Answer Mode	Video	• 0
Busy Tone		0
Indoor Auto Answer		0
Direct IP Call	v	0
Direct IP Call Port	5060	(1~65535) (1

Parameter Set-up:

- **Direct IP Call**: tick the check box to enable the direct IP call. For example, if you do not allow direct IP call to be made on the device, you can untick the check box to terminate the function.
- **Direct IP Call Port**: the direct IP Call Port is "**5060**" by default with the port range from **1-65535**. And you enter any values within the range other than the 5060, you are required to check if the value entered is consistent with the corresponding value on the device you wish to establish a data transmission with.

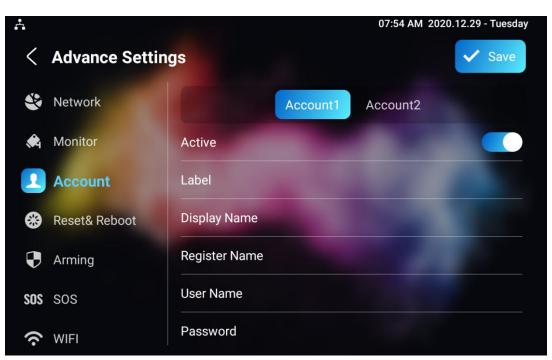

11.2.SIP Call & SIP Call Configuration

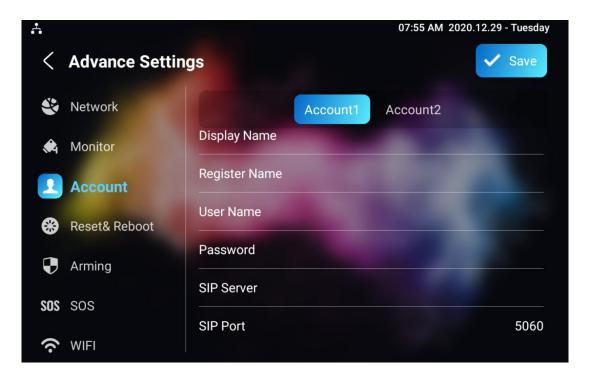

You can make SIP call (**Session Initiation Protocol**) in the same way as you do for making the IP calls on the device. However, SIP call parameters related to its account, server, and transport type need to configured first before you can make calls on the device.

11.3.SIP Account Registration

Akuvox X933 series indoor monitors support two SIP accounts that can all be registered according to your applications. For example, you can switch between the two SIP accounts. The SIP account can be configured on the device and on the device interface. To configure the SIP account on the device **Settings > Advance Settings > Account** screen. Akuvox Smart

X933 Administrator Guide

Parameter Set-up:

Account1/Account2: select Account1 or Account2. Account1 is the default SIP account.

• **SIP Port**: enter the SIP server port for communication. The SIP port is "5060" by default.

The parameter settings for SIP account registration can be configured on the Account setting screen and they can also be configured on the device web **Account > Basic > SIP Account** interface.

Account » Basic			
SIP Account ⑦			
	Status	Disabled	0
	Account	Account1	• 🤊
	Account Enabled		?
	Display Label		0
	Display Name		0
	Register Name		0
	Username		0
	Password		0
	Password		0

- Status: check to see if the SIP account is registered or not.
- Account: select Account1 or Account2.
- Account Enabled: check to active the registered SIP account.
- **Display Label**: configure the device label to be shown on the device screen.
- **Display Name**: configure the name, for example, the device's name to be shown on the device being called to.

- **Register Name**: enter the SIP account register Name obtained from the SIP account administrator.
- Username: enter the user name obtained from SIP account administrator.
- **Password**: enter the password obtained from the SIP server.

11.4.SIP Server Configuration

SIP server can be set up for device in order to achieve call session through SIP server between intercom devices. To perform the SIP account setting on the Web **Account > Basic > SIP Account** Interface.

SIP Server ⑦			
	Server Address		0
	Sip Server Port	5060	(1024~65535) (?)
	Registration Period	1800	(30~65535 Sec) 🧿

- Server IP: enter the Server's IP address number or its URL.
- **Port:** set up SIP server port for data transmission.
- Registration Period: set up SIP account registration time pan. SIP re-registration will start automatically if the account registration fails during the registration time span. The default registration period is "1800", ranging from 30-65535s.

11.5.Outbound Proxy Server configuration

An outbound proxy server is used to receive all initiating request messages and route them to the designated SIP server in order to establish call session via port-based data transmission. To configure outbound Proxy server on **Account > Basic > Outbound Proxy Server** interface.

0		
Outbound Enabled		0
Preferred Outbound Proxy Server		0
Preferred Outbound Proxy Sever Port	5060	(1024~65535) (
Alternate Outbound Proxy Server		0
Alternate Outbound Proxy Sever Port	5060	(1024~65535) (

- **Outbound Enable:** check or uncheck to turn on or turn off the outbound proxy server.
- **Preferred Outbound Proxy Server.** enter the SIP address of the outbound proxy server.
- **Preferred Outbound Proxy Port:** Enter the Port number for establish call session via the outbound proxy server.
- Alternate Outbound Proxy Server. set up Backup Server IP for the backup outbound proxy server.
- Alternate Outbound Proxy Port: enter the Port number for establish call session via the backup outbound proxy server.

11.6.SIP Call DND & Return Code Configuration

DND (**Do not disturb**) setting allows you not to be disturbed by any unwanted incoming SIP calls. You can set up DND related parameters properly on the device web **Phone > Call Feature > DND** interface to block SIP calls you do not intend to answer. In the meantime, you can also define the code to be sent to the SIP server when you want to reject the call.

DND 💿				
	Whole Day			0
	Schedule			0
	DND Start Time	12:00 am		0
	DND End Time	12:00 am		Next Day (
	Return Code When DND	486(Busy Here)	*	0

Parameter Set-up:

- **DND**: check **Whole Day** or **Schedule** to enable the DND function. DND function is disabled by default.
- Return Code When DND: select what code should be sent to the calling device via SIP server. 404 for "Not found"; 480 for "Temporary unavailable"; 486 for "busy here".
- **Return Code When Refuse**: select code to be sent to the caller side via SIP server when you rejected the incoming call.

11.7.Device Local RTP configuration

For the device network data transmission purpose, device needs to be set up

with a range of RTP port (**Real-time Transport Protocol**) for establishing an exclusive range of data transmission in the network. To set up device local RTP on web **Network > Advanced > Local RTP** interface.

(1024~65535)
(1024~65535)

Parameter set-up:

- **Starting RTP Port**: enter the Port value in order to establish the start point for the exclusive data transmission range.
- **Max RTP port**: enter the Port value in order to establish the end point for the exclusive data transmission range.

11.8.Data Transmission Type Configuration

SIP message can be transmitted in three data transmission protocols: UDP (User Datagram Protocol), TCP (Transmission Control Protocol), TLS (Transport Layer Security) and DNS-SRV. In the meantime, you can also identify the server from which the data come from. To do this configuration on web Account > Basic > Transport Type interface.

	UDP
	TCP
Transport Type 💿	TLS
	DNS-SRV
Туре	UDP

Parameter Set-up:

- **UDP**: select **"UDP"** for unreliable but very efficient transport layer protocol. UDP is the default transport protocol.
- **TCP**: select **"TCP**" for Reliable but less-efficient transport layer protocol.
- **TLS**: select "**TLS**" for Secured and Reliable transport layer protocol.
- **DNS-SRV:** select "**DNS-SRV**" to obtain DNS record for specifying the location of services. And **SRV** not only records the server address but also the server port. Moreover, SRV can also be used to configure the priority and the weight of the server address.

11.9.Call Setting

X933 will auto answer all incoming calls if call auto-answer is enabled and receive live stream if live stream is enabled.

11.9.1. Call Auto-answer Configuration

X933 will auto answer all incoming calls if call auto-answer is enabled and receive live stream if live stream is enabled. To do the configuration on web **Account > Advanced > Call > Auto Answer** and **Phone > Call Feature** interface.

Call 💿			
	Max Local SIP Port	5062	(1024~65535) ⑦
	Min Local SIP Port	5062	(1024~65535) 🤊
	PTime(ms)	20	▼ ⑦
	Auto Answer		0
	Prevent SIP Hacking		0
Others ⑦			
Others 💿	Return Code When Refuse	486(Busy Here)	• (3)
others ③	Return Code When Refuse Auto Answer Delay	486(Busy Here) 0	▼ ⑦ (0-305ec) ⑦
Others 💿		pr (0) (5.)	
Others 💿	Auto Answer Delay	0 Video Audio	(0-30Sec) ⑦
Others	Auto Answer Delay Answer Mode	0 Video	(0-30Sec) ⑦
Others 💿	Auto Answer Delay Answer Mode Busy Tone	0 Video Audio Video	(0-305ec) ⑦

- **Auto Answer:** turn on the the Auto Answer function by ticking the square box .
- Auto Answer Delay: set up the delay time (from 0-30 sec.) before the call can be answered automatically. For example, if you set the delay time as 1 second, then the call will be answered in 1 second automatically.
- **Answer Mode:** set up the video or audio mode you preferred for answering the call automatically.
- **Indoor Auto Answer:** turn on the Auto Answer function for call from other indoor monitors by ticking the check box .

11.9.2. Auto-answer Allow List setting

Auto answered can only be applicable to the SIP or IP numbers that are already added in the auto-answer white-list of your indoor monitor. Therefore, you are required to configure or edit the numbers in the white-list on web **Phone > Call Feature > Auto Answer AllowList** interface.

			+ Add E	Import Expor
In	dex	Device Location	SIP/IP	Edit
	1	Gate	101	Ø
	2	Lobby	102	
	3	Front Door	192.168.3.15	
		Prev 1/1	Ned	
	Delete All	Prev 1/1		
	Delete All Uto Answer Allow Device Location	Prev 1/1		1
	Delete All	Prev 1/1		1

SIP/IP numbers can be imported to or exported out of the indoor monitor in batch on web **Phone > Call Feature > Whitelist Import/Export** interface.

Not selected any files	Select File	🔿 Reset	
			Import

Note:
SIP/IP number files to be imported or exported must be in either .xml or .csv format.
SIP/IP number must be set up in the phone book of the indoor monitor before they can be valid for the auto-answer function

11.9.3. Live Stream Setting

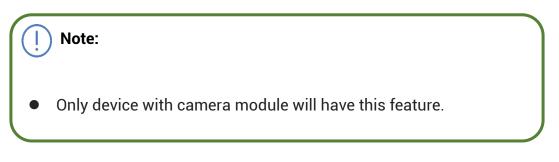

Receive Live Stream on the indoor monitor allows you to see the video image (one way video stream) from the calling device such as a door phone whether or not you answered the call in audio or video mode, while the video image from your indoor monitor will not be sent to the calling devices in order to protect your privacy. To do the configuration on web **Phone > Call Feature >Audio Call Settings** interface.

Audio Call Setting 🕜	
Receive Live Stream	0

After the feature is enabled, once a caller require a video call:

- If we received the coming call as Video call at X933 side, will build two-way video conversation, be able to see each other.
- If we received the coming call as Audio call at X933 side, will build one-way video conversation, only be able to see the live streaming from caller.

11.10. Intercom Call Configuration (intercom preview, mute)

If you want to see the image at the door station before answering the incoming call, you can enable the intercom preview function on web **Phone > Intercom > Intercom** interface.

Intercom 💿		
Intercom Active	3	
Intercom Mute	0	
Intercom Preview	0	

- Intercom Active: Tick the check box to enabled or disabled intercom function.
- Intercom Mute: Tick the check box to enable mute the voice from the callee side and vice versa.

• **Intercom Preview:** Tick the check box to enable the incoming call preview function. If enable intercom preview, the group call is not available.

11.11. Emergency Call Setting

Emergency call is used to call out three emergency contacts when you are in urgent status. Especially for the elders and children. To display Emergency call softkey on web **Phone > Key/Display > Home Page Display/More Page Display** interface.

Area	Туре	Value	Label	Icon(max size:50°50)
Area1	Call 🗸			Not selected any files Select File
Area2	SOS 👻		SOS	Not selected any files Select File
Area3	DND			
Area4	Monitor 🗸	•		Not selected any files Select File
Page Display 🧿	Туре	Value	Label	Exart Icon(max size:50°50)
Page Display 🤄			Label	-

After setup on web ,you also need to do the configuration on device **Settings > Advance Settings > SOS** screen.

Akuvox Smart

X933 Administrator Guide

÷		03:40 AM 2021.04.2	21 - Wednesday
<	Advance Setting	gs	✓ Save

List ③	Listen Address 224.1.6.11.51230	

11.13. Call Forwarding Setting

Call Forward is a feature used to redirect an incoming call to the specific third party. Users can redirect the incoming call based on different scenarios. Typically, call forward has three modes: **Always Forward/ No Answer Forward/Busy Forward**.

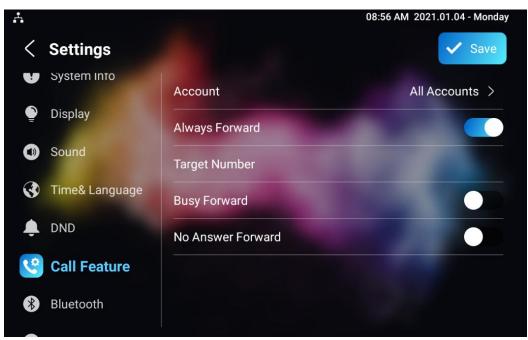

11.13.1. Call Forwarding Configuration on the Device

To do the configuration on the Device **Settings >Call Feature** interface.

X933 Administrator Guide

70

- Account: To choose which account shall implement call forwarding feature.
- Always Forward: To enable always forwarding function; all incoming calls will be automatically forward to a specific number.
- **Busy Forward:** To enable busy forwarding function; incoming calls will be forwarded to a specific number if phone is busy.
- No Answer Forward: To enable no answer forwarding function; incoming calls will be forwarded to a specific number if phone is not picked within no answer ring time.
- **Target Number:** To enter the specific forward number if X933 enables always forward / busy forward / no answer forward.

11.13.2. Call Forwarding Configuration on the Web

Interface

To set up forward function on web **Phone > Call Feature > Call Forward** interface.

Call Foward ⑦		
Always Transfer	Disabled v	0
Designated Call Forward Number		0
Busy Transfer	Disabled 💌	0
Designated Call Forward Number		0
No Answer Transfer	Disabled v	0
Designated Call Forward Number		0
No Answer Call Transfer Duration (Sec)	30 💌	3

- Always Transfer: To enable always forwarding function; all incoming calls will be automatically forward to a specific number.
- **Busy Transfer:** To enable busy forwarding function; incoming calls will be forwarded to a specific number if phone is busy.
- No Answer Transfer: To enable no answer forwarding function; incoming calls will be forwarded to a specific number if phone is not picked within no answer ring time.
- **Designated Call Forward Number**: To enter the specific forwarding number if X933 enables always forwading / call forwarding busy / no answer forwarding.

• No Answer Call Transfer Duration (Sec) : to set the no answer time interval from 0-120 seconds before the call is transferred to a designated number.

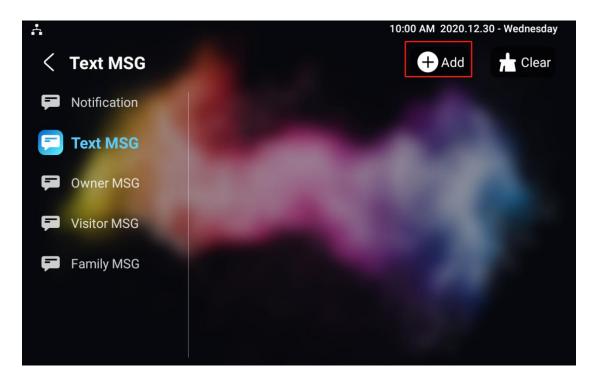

12. Intercom Message Setting

You can read, create, and delete messages on the **Message** screen.

12.1.Manage Messages

You can check, create and clear messages as needed on the X933 indoor monitor Message screen. Click Add to create a new text message and Clean icon to delete the existed messages.

Parameter Set-up:

- **Notification:** the message from property manager, this feature is only available when using SDMC or Akuvox SmartPlus.
- **Text MSG:** to send or receive or manage the text message here.

AKUVOX SMART INTERCOM www.akuvox.com

- **Owner MSG:** if you enable this feature, and no body answer the incoming call within the pre-configure ring time ,the visitor will hear the owner audio message.
- Visitor MSG: if you enable visitor message feature, and no body answer the incoming call within the pre-configure ring time, it will save the visitor record.
- Family MSG: you can record the audio messages for your family members.

12.2. Configure Voice Message (MWI)

MWI (Message Waiting Indicator) is a notification that notifies you when you have a new voice mail message. To do the configuration on web **Account > Advanced > Subscribe** interface.

Subscribe ⑦			
	MWI Subscribe		0
	MWI Subscribe Period	1800	(120~65535Sec) ⑦
	Voice Mail Number		0

Parameter Set-up:

- **MWI Subscribe:** Tick the check box to enable MWI function.
- Voice Mail Number: Enter the voice mail number for accessing your voice mail messages.

• **MWI Subscribe Period :** Set up interval between the MWI Subscribe messages.

13. Audio& Video Codec Configuration for SIP Calls

13.1.Audio Codec Configuration

Akuvox indoor monitor supports seven types of Codec (iLBC_13_3, iLBC_15_2, L16, PCMU, PCMA, G729, G722 for encoding and decoding the audio data during the call session. Each type of codec varies in terms of sound quality. You can select the specific codec with different bandwidth and sample rate flexibly according to the actual network environment.

To do the configuration on web **Account > Advanced > SIP Account** interface.

	Account		Account1		• 0
Audio Codecs 🕥					
	1/3 items Disabled Codecs		4 items	Enabled Codecs	
	U iLBC_13_3		PCMU		
	iLBC_15_2	\geq	PCMA		
	L16	<	G729		
			G722		

Please refers to the bandwidth consumption and sample rate for the four codec types below:

X933 Administrator Guide

Codec Type	Bandwidth Consumption	Sample Rate
РСМА	64 kbit/s	8kHZ
PCMU	64 kbit/s	8kHZ
G729	8 kbit/s	8kHZ
G722	64 kbit/s	16kHZ
iLBC_13_3	8,16 kbit/s	13.3kHZ
iLBC_15_2	8,16 kbit/s	15.2kHZ
L16	128 kbit/s	variable

13.2.Video Codec Configuration

X933 series supports VP8, H263, H264, H265 codec that provides a better video quality at a much lower bit rate with different video quality and payload. To do the configuration on web **Account > Advanced > Video Codecs** interface. Choose a available video codecs and setup the codecs parameters.

2 items	Disabled Codecs	2 items	Enabled Codecs
H265		H264	
UP8		> H263	
		<	

Name	H263	C
Resolution	CIF	•
Bitrate	320	•
Payload	34	•
Name	H264	C
Resolution	CIF	• 0
Bitrate	320	• 0
Payload	104	• 0
Name	VP8	C
Resolution	CIF	• 0
Bitrate	320	•
Payload		•

Parameter Set-up:

- **Name**: Check to select the H264 video codec format for the door phone video stream. H264 is the video codec by default.
- **Resolution:** select the code resolution for the video quality among four options:"QCIF", "CIF", "VGA", "4CIF" and "720P" according to your actual network environment. The default code resolution is 4CIF.
- **Bitrate:** select the video stream bit rate (Ranging from 320-2048). The greater the bitrate, the data transmitted in every second is greater in amount therefore the video will be clearer.. While the default code bitrate is 2048.
- **Payload:** select the payload type (ranging from 90-118) to configure audio/video configuration file. The default payload is 104.

14. Security

14.1.Monitor and Image

14.1.1. Monitor Setting

You can configure the monitor setting on the web **Phone** - **Monitor** interface. Enter IP/SIP number of door phone in Device number and fill in device name. Then set up the RTSP address. The RTSP format of the Akuvox door phone is <u>rtsp://deviceIP/live/ch00_0</u>. Enable or disable display in the call. If enabled, when there is an incoming call from the monitor, the video will be displayed.

14.1.2. Video Image Capturing

To capture video image by pressing **Monitor** > **Capture** on device screen.

AKUVOX SMART INTERCOM www.akuvox.com

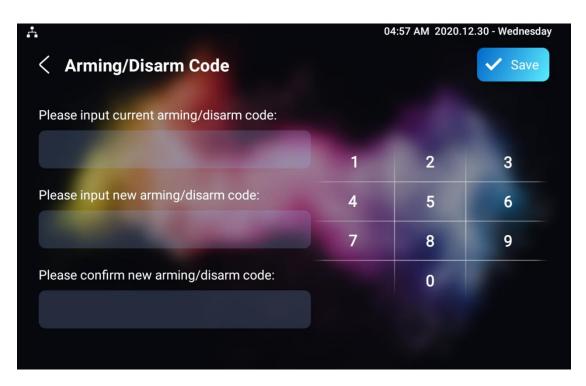

14.2. Alarm and Arming Configuration

Alarm feature is used to connect some alarm detection devices to protect your home safe. Akuvox indoor monitors support 8 alarm connectors which means you can connect 8 different alarm sensors in different rooms of your house. For example, connecting a smoker sensor in your kitchen to detect if the gas leak, the indoor monitor will ring up and send the alarm message to the target, like community property.

14.2.1. Configure Alarm and Arming on the Device

To configure the arming and disarm code on device **Arming > Arming/Disarm Code** screen.Change the current password and save it.

To check the zone status on **Arming > Zone Status** screen.

AKUVOX SMART INTERCOM www.akuvox.com 81

X933 Administrator Guide

Å			05:00 AM 20	20.12.30 - Wednesday
< Zone Sta	tus			
Zone	Location	Zone Type	Trigger	Status
Zone1	Bedroom	Infrared	NC	Enable
Zone2	Guest room	Smoke	NC	Enable
Zone3	Bedroom	Infrared	NC	Disable
Zone4	Bedroom	Infrared	NC	Disable
Zone5	Bedroom	Infrared	NC	Disable
Zone6	Bedroom	Infrared	NC	Disable
Zone7	Bedroom	Infrared	NC	Disable
70	Deducer	I	No	Disable

14.2.2. Configure Alarm and Arming on the Web Interface

To set up a location-based alarm sensor on the device web **Arming> Zone Setting > Zone Setting** interface.

Zone	Location	Zone Type	Trigger Mode	Status
Zone1	Bedroom 💌	Infrared 💌	NC 💌	Enabled
Zone2	Bedroom 💌	Drmagnet 💌	NC 💌	Enabled
Zone3	Bedroom 👻	Smoke 💌	NC 🗸	Disabled

Parameter Set-up:

 Location: set up the location according to where the alarm sensor is installed. You can select among ten location types: "Bedroom", "Gate", "Door" "Guest room", "Hall", "Window", "Balcony", "Kitchen", "Study"

and "Bathroom".

- **Zone Type:** set up the alarm sensor types. You can select among five sensor types: "**Infrared**", "**Drmagnet**", "**Smoke**", "**Gas**", "**Urgency**".
- **Trigger Mode**: set sensor trigger mode between "**NC**" and "**NO**" according to your need.
- Status: set the alarm sensor status among three options: "Enable", "Disable","24H". Select "Enable" if you want to enable to the alarm, however you are required to set the alarm again after an alarm is disarmed. Select " Disable" if you want to disable the alarm, and select "24H" if you want alarm sensor to stay enabled for 24 hours without needing to set up the alarm manually again after the alarm is disarmed.

14.2.3. Configure Location-based Alarm

* <	Arming N	⁄lode			02:57 AM 2020.12.	30 - Wednesday
			Home N	ight Away		
	Zone	Location	Zone Type	Defence Delay	Alarm Delay	Status
	Zone1	Bedroom	Infrared	90s delay >	90s delay >	Disable
	Zone2	Bedroom	Infrared	90s delay >	90s delay >	Disable
	Zone3	Bedroom	Infrared	90s delay >	90s delay >	Disable
	Zone4	Bedroom	Infrared	90s delay >	90s delay >	Disable
	Zone5	Bedroom	Infrared	90s delay >	90s delay >	Disable
	70006	Radroom	Infrared	V velob and	Vieleb and	Dicable

Configure the alarm sensor in the same way you do on the web interface.

AKUVOX SMART INTERCOM www.akuvox.com

Parameters set up:

- Location: To select which location the detection device is in, including Bedroom, Guest room, Hall, Window, Balcony, Kitchen, Study and Bathroom.
- **Zone type**: To select which type of detection device is, including Infrared, Drmagnet, Smoke, Gas, and Urgency.
- **Defence delay**: It means when users change the arming mode from other modes, there will be 90 seconds delay time to get activated.
- Alarm delay: It means when the sensor triggered, there will be 90 seconds delay time to announce the notification.
- **Status**: To enable or disable Arming mode on the corresponding Zone.

14.2.4. Configure Alarm Text

After the alarm sensor is set up, you are allowed to customize your alarm text shown on the screen when an alarm is triggered on web **Arming> Zone Setting > Zone Setting** interface. Enter the alarm text for the alarm at each location according to your need.

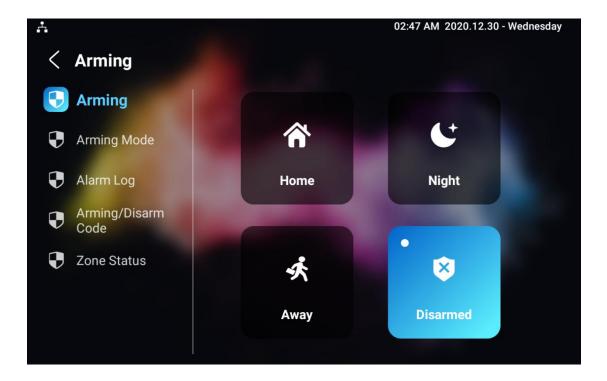

Customized Alarm 🕜				
	Customized Alarm Enabled		0	
Zone		Alarm Content		
Zone1		Alarm was Triggered		
Zone2		Alarm was Triggered		
Zone3		Alarm was Triggered		
Zone4		Alarm was Triggered		
Zone5		Alarm was Triggered		
Zone6		Alarm was Triggered		
Zone7		Alarm was Triggered		
Zone8		Alarm was Triggered		

14.2.5. Configure Arming mode

To switch arming mode, disarm the alarm on **Arming** screen by pressing their respective icons. Press **Disarm** icon if you want to clear the Arming Mode.

14.2.6. Configure Alarm Ringtone

You can upload customized alarm ringtone by choosing the local audio file on web **Phone-Audio-Alarm Ringtone Upload** interface.

AKUVOX SM	ART INTERCOM	www.akuvox.com	85
	Alarm Ringtone	default.wav	
	Alarm Ringtone Upload	port 🕜	
	Alarm Ringtone Upload	port 🕜	

Note:

• The file format of customized ringtone should be .wav.

14.2.7. Alarm Action Configuration

The triggering of the alarm sensor can be accompanied by the the actions you configured in forms of HTTP command, SIP Message, Call, Local Relay for different security purposes.

14.2.7.1. Select Alarm Action Types

To select and set up actions on web **Arming > Alarm Action > Alarm Action** interface.

X933 Administrator Guide

14.2.8. Check Alarm Log

To check alarm log on device **Settings > Arming Log** screen.

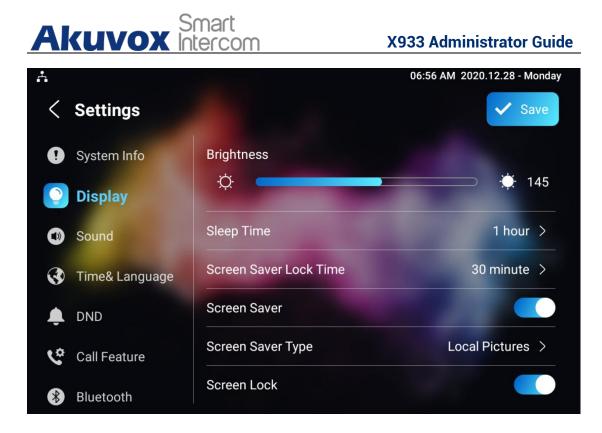

AKUVOX SMART INTERCOM www.akuvox.com 89

No.	Location	Zone	Zone Type	Time
1	Bedroom	Zone1	Infrared	5:23 A

14.3. Screen Unlock Setting

You can enable screenlock function directly on the device **Settings > Display Setting** screen. The device screen will be locked over the sleep time. You are required to wake up the device through the face recognition (Face ID) or password.

14.3.1. Screen Unlock by PIN code

You can unlock X933 device screen by entering the pre-configured PIN code when the screen is locked.

Akuvox	Smart Intercom

			×
1	2	3	
4	5	6	
7	8	9	
Assitance	0	~	

• Default unlock PIN is 123456.

14.4.Voice Encryption

The encryption function provides you with greater security for the intercom call. And, X933 series support three modes of voice encryption: SRTP(compulsory), SRTP(Optional), ZRTP(Optional) on web **Account > Advanced > Encryption** interface.

Parameter Set-up:

 Voice Encryption: select encryption mode from four options. If you select to Disable it, the call will not be encrypted. SRTP(Compulsory), all audio signals (technically speaking it is RTP streams) will be encrypted to improve security. SRTP(Optional), encrypts voice from the called party, if the called party also enables SRTP, the voice signals will also be encrypted. ZRTP(Optional) is the protocol that the two parties use to negotiate the SRTP session key.

14.5.Remote Control

Remote control function supports configuring a specific server to send HTTP commands or request to the indoor monitor to do some specific action on web **Phone - Relay - Remote Control** interface.

Allowed Access IP List	0

15. Door Access Control Configuration

15.1.Relay Switch Setting

15.1.1. Local Relay Setting

Local relays in X933 indoor monitor can be used to trigger relay for the door access and trigger Chime bell as needed in different scenarios. You can do this configuration on web **Phone - Relay - Relay Setting - Local Relay** interface.

Relay Setting ⑦			
Local	Relay1		
Relay	Delay (Sec)	3	• ?
Relay	Туре	Open Door	• (?)
Remo	te Control	Disabled	• ?
DTMF			0

Parameter Set-up:

- **Relay Delay:** Set the relay delay time after the relay is triggered.
- **Relay Type:** Set relay action type. There are two types of relay, chime bell and open door. **Chime Bell**, when there is a call, the chime bell will ring. **Open door**, when press the unlock icon, the local relay will be opened.
- **Remote Control:** Enable it to trigger local relay by DTMF and vice versa.

AKUVOX SMART INTERCOM www.akuvox.com 94

• **DTMF:** Set the DTMF to trigger the local relay when you enable Remote control.

15.1.2. Remote Relay Switch Setting

You can use the unlock tab during the call to open the door on web **Phone -Relay - Relay Setting - Remote Relay** interface. You are required to set up the same DTMF code in the door phone and indoor monitor.

Remote Relay		
DTMF1 Code	#	0
DTMF2 Code	#	?
DTMF3 Code	#	?

Parameter Set-up:

• **DTMF Code:** To set DTMF code for the remote relay, which is "#" by default.

15.2. Web Relay Setting

In addition to the relay that is connected to X933, you can also control the door access using the network-based web relay. To do this configuration on web **Phone - Relay - Web Relay** interface.

	IP Address		0	
	Username		0	
	Password		0	
elay Action Setting	0			
	۲ ۹	SIP	Web Relay	Action
Action ID 1		ŞIP	Web Relay	r Action

Parameter Set-up:

Web Relay (?)

- IP address: enter the web relay IP address.
- User Name: enter the User name provided by the web relay manufacturer.
- **Password:** enter the password provided by the web relay manufacturer. The passwords is authenticated via HTTP and you can define the passwords using "http get" in Action.
- Web Relay Action: enter the specific web relay action command provided by the web manufacturer for different actions by the web relay.
- **IP/SIP:** Enter the relay extension information, which can be a IP address or SIP account of an intercom device such as an indoor monitor, so that the specific action command will be sent when unlock is performed on the intercom device, while this setting is optional. And please refer to the example below:

http://admin:admin@192.168.1.2/state.xml?relayState=2.

15.3.Door Unlock Configuration

15.3.1. Door Unlock by DTMF Code

AKUVOX SMART INTERCOM www.akuvox.com

DTMF codes can be configured on the web **Account > Advanced > DTMF** interface where you can set up identical DTMF code on the corresponding intercom devices, which allows residents to enter the DTMF code on the soft keypad or press DTMF code attached unlock tab on the screen to unlock the door for visitors etc., during a call.

OTMF ⑦				
	Туре	RFC2833	•	0
	DTMF Code Transport format	Disabled	•	0
	Payload	101		(96~127) ⑦

Parameter Set-up:

- Type: select DTMF type among four options: "Inband", "RFC2833", "Info+Inband" and "Info+RFC2833" according to your need.
- How to Notify DTMF: select among four options: "Disable" " DTMF"
 "DTMF-Relay" "Telephone-Event" according to your need.
- **DTMF Payload**: select the payload 96-127 for data transmission identification.

Note:

• Please refer to the chapter **Relay Switch Setting** for the specific DTMF code setting. Intercom devices involved must be consistent in the DTMF type, otherwise DTMF code cannot be applied.

15.3.2. Door Unlock via HTTP Command

You can unlock the door remotely without approaching the device physically for the door access by typing the created the HTTP command (URL) on the web browser to trigger the relay when you are not available by the door for the door access. To do this configuration on web **Intercom > Relay > Open Relay via HTTP** interface.

Open Relay Via HTTP 🕜	
Switch	3
Username	0
Password	 0

Parameter Set-up:

- **Switch:** Enable it to allow the relay to be triggered remotely using HTTP command.
- **Username:** Enter the device username to be used as a part of HTTP command to trigger the local relay.
- **Password:** Enter the device password to be used as part of HTTP command to trigger the local relay.
- Please refer to the following example: <u>http://192.168.35.127/fcgi/do?action=OpenDoor&UserName=admin&Pa</u> <u>ssword=12345&DoorNum=1</u>

Note:

Î

 DoorNum in the HTTP command above refers to the relay number #1 to be triggered

16. Lift Control

You can summon lift at home via lift control feature.

16.1.Configure Lift Control

To enable and set the display status Lift icon on device web **Phone > Lift> Lift Control** interface.

Name	Status	lcon	Label	Http Command
Lift1	Disabled 💌	Up 💌		http:// 💌
Lift2	Disabled 🔻	Up 🔻		http:// 🔻

Parameter set-up:

- Status: click to enable or disable the lift button.
- Icon: click to select icon for the button.
- Label: enter the title for the button.
- **HTTP Command:** select http:// or https:// for head of http command and enter http command.

16.2.Configure Lift Control Prompt

When the lift controller receive the http command, it will feedback the current lift status with a prompt. To do this configuration on web **Phone > Lift> Hints** interface. Edit the **HTTP Status Code**, feedback code from Lift control board.

			+ Add ③ Import	Export 🔻
Index	HTTP Status Code	Lift	Hints	Edit
1	200	Lift1	Lift is coming to your floor	
2	200	Lift2	Lift has been sent to Ground Floor	

If there are huge amounts of Prompts need to be added, you can click **Export** tab to export a template, after editing to import/export.

		I	+ Add	Elmport	Export 🔻

17. Firmware Upgrade

17.1.1. Configure Alarm Action via HTTP Command

Firmwares of different versions for indoor monitor can be upgraded on the device web **Upgrade > Basic** interface.

Basic 🕜			
	Firmware Version	933.255.1.22	0
	Hardware Version	1.0	0
	Upgrade	€ Import	0
	Factory Default	🗇 Reset	0
	Reset Config	🔿 Reset	0
	Reboot	🕐 Reboot	0

18. Backup

Configuration files can be imported to or exported out of the device to your local PC on the device web **Upgrade > Advanced > Others** interface if needed.

Others ③	
Config File	② Import

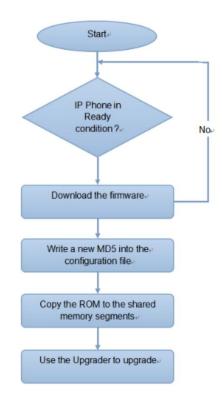

19. Auto-provisioning via Configuration File

19.1.Provisioning Principle

Auto-provisioning is a feature used to configure or upgrade the devices in batch via third party servers. **DHCP, PNP, TFTP, FTP, HTTPS** are the protocols used by the Akuvox intercom devices to access the URL of the address of the third party server which stores configuration files and firmwares, which will then be used to to update the firmware and the corresponding parameters on the door phone.

Please see the flow chart below:

AKUVOX SMART INTERCOM www.akuvox.com ¹⁰⁴

19.2.Introduction to the Configuration Files for Auto-Provisioning

Configuration files have two formats for the auto-provisioning. one is the general configuration files used for the general provisioning and other one is the MAC-based configuration provisioning.

The difference between the two types of configuration files is shown as below:

- General configuration provisioning: a general file is stored in a server from which all the related devices will be able to download the same configuration file to update parameters on the devices. For example : cfg.
- MAC-based configuration provisioning: MAC-based configuration files is used for the auto-provisioning on a specific device as distinguished by its unique MAC number. And the configuration files named with device MAC number will be matched automatically with the device MAC number before being downloaded for the provisioning on the specific device.

Note:

 If a server has these two types of configuration files, then IP devices will first access the general configuration files before accessing the MAC-based configuration files.

19.3.Autop Schedule

Akuvox provides you with different Autop methods that enable the indoor monitor to perform provisioning for itself in a specific time according to your schedule. To set up the schedule on device web **Upgrade > Advanced > Automatic Autop** interface.

Please see the picture below:

Automatic Autop ③		
Mode	Repeatedly	0
Schedule	Sunday 🔻	0
	22	(0~23Hour)
	0	(0~59Min)
Export Autop Template	🕒 Export	
Clear MD5	📩 Clear	0

Parameter Set-up:

- **Power On:** select "**Power on**", if you want the device to perform Autop every time it boots up.
- **Repeatedly:** select "**Repeatedly**", if you want the device to perform autop according to the schedule you set up.
- **Power On + Repeatedly:** select "**Power On + Repeatedly**" if you want to combine **Power On** Mode and **Repeatedly** mode that will enable the device to perform Autop every time it boots up or according to the schedule you set up.
- Hourly Repeat: select "Hourly Repeat" if you want the device to perform Autop every hour.

19.4.DHCP Provisioning Configuration

Auto-provisioning URL can also be obtained using DHCP option which allows device to send a request to a DHCP server for a specific DHCP option code. If you wan to use **Custom Option** as defined by users with option code range from 128-255), you are required to configure DHCP Custom Option on the web **Upgrade > Advanced > Automatic Autop** interface.

	Clear MD5	合 Clear	3

-ODatabase	<u>2</u> 3 128 [tf:p://192. □ Express <u>0</u> K			

1	Note:
•	The custom Option type must be a string. The value is the URL of TFTP server.

Custom Option (128-254) (?) DHCP Option Enabled Image: Custom Option Option 43 Option 66 (?)	DHCP Option ③			
DHCP Option Enabled I Custom Option I Option 43 Option 66		Custom Option		(128~254) ⑦
		DHCP Option Enabled	💟 Custom Option 🛛 Option 43 💟 Option 66	0

Parameter Set-up:

- **Custom Option**: enter the DHCP code that matched with corresponding URL so that device will find the configuration file server for the configuration or upgrading.
- DHCP Option 66: If none of the above is set, the device will automatically use DHCP Option 66 for getting the upgrade server URL. This is done within the software and the user does not need to specify this. To make it work, you need to configure the DHCP server for the option 66 with the update server URL in it.
- **DHCP Option 43:** If the device does not get an URL from DHCP Option 66, it will automatically use DHCP Option 43. This is done within the software and the user does not need to specify this. To make it work, you need to configure the DHCP server for the option 43 with the update server URL in it.

Akuvox Smart X933 Administrator Guide Note: The general configuration file for the in-batch provisioning is with the format "cfg" taking R29 as an example "r000000000029.cfg (10 "zeros" in total while the MAC-based configuration file for the specific device provisioning is with the format "MAC_Address of the device.cfg, for example "0C110504AE5B.cfg."

19.5. Static Provisioning Configuration

You can manually set up a specific server URL for downloading the firmware or configuration file on device web **Upgrade > Advanced > Automatic Autop** interface. If an autop schedule is set up, the indoor monitor will perform the auto provisioning on a specific timing according to autop schedule you set up. In addition,TFTP, FTP, HTTP, and HTTPS are the protocols that can be used for upgrading the device firmware and configuration.

Parameter set-up:

- URL: set up tftp, http, https, ftp server address for the provisioning
- User Name: set up a user name if the server needs an user name to be accessed to otherwise leave it blank.
- **Password**: set up a password if the server needs a password to be accessed to otherwise leave it blank.
- **Common AES Key**: set up AES code for the intercom to decipher general Auto Provisioning configuration file.
- **AES Key (MAC)**: set up AES code for the intercom to decipher the MAC-based auto provisioning configuration file.

Note:

 AES is one type of encryption, it should be configured only when the config file is encrypted with AES, otherwise leave the field blank.

Note:

server Address format:

- TFTP: <u>tftp://192.168.0.19/</u>
- FTP. <u>ftp://192.168.0.19/</u> (allows anonymous login)
- <u>ftp://username:password@192.168.0.19/</u>(requires a user name and password)
- HTTP: <u>http://192.168.0.19/</u> (use the default port 80)
- <u>http://192.168.0.19:8080/</u> (use other ports, such as 8080)
- HTTPS: https://192.168.0.19/ (use the default port 443)

Tip:

- Akuvox do not provide user specified server.
- Please prepare TFTP/FTP/HTTP/HTTPS server by yourself.

20. Voice Assistant

You can configure voice assistant named "Albert" to perform a variety of functions related to intercom call, open-door, arming modes etc. on the device. And you can also set up the specific relay to be triggered by the voice assistant for the door access control. To configure the voice assistant on device Settings > Voice Assistance screen.

Parameter Set-up

- Language Type: select the language according to your need.
- **Recognition Sensitivity:** adjust the voice assistance recognition sensitivity among "Low", " Normal" and " High" according to your need.
- Talk Mode: move the toggle switch to the right if you want to enable the the talk mode. When the Talk mode is enabled, voice assistant will stay on to receive your voice commands during a time span of 30 seconds without your needing to call " Albert" again to wake up the voice assistant., while if you disable it, the voice assistant will be wake up again for each voice command.
- Not Disturb At Night: move the toggle switch to the left to enable the function. This function is applied when you want the voice assistant to stay silent while carrying out what it is made to do according to your voice commands.
- **Supported Command**: enable or disable the 22 voice commands according to your need.

Please see the voice command details below:

N O	Voice Command	Description	Voice Prompt
1	Intruder mode off	Use it when you want to clear the arming mode when the arming alarm is triggered. (you are required to enter the disarm password in the pop-out window initiated by the voice assistant)	
2	Clear arming	ibid	ibid

21. Call Log

If you want to check on the calls inclusive of the dial-out calls, received calls, and missed calls in a certain period of time, you can check and search the call log on the device web **Contact -> Call Logs** interface and export the call log from the device if needed.

Upper Limit 100 ⑦ Call History All Bexport All Hang	
	Up ()
Index Type Date Time Local Identity Name	Number
1 Missed 29-12-2020 7:19:33 AM 192.168.0.32@192.168.0.32 manager 192.168.0	0.31@192.168.0.31
2 Received 29-12-2020 1:55:27 AM 192.168.0.32@192.168.0.32 192.168.13.142 192.168.13	142@192.168.13.142
3 Dialed 29-12-2020 1:42:22 AM 192.168.0.32@192.168.0.32 192.168.13.157 192.168.13.157	<u>157@192.168.13.157</u>
Delete II Prov 1/1 Next	1 Go

Parameter Set-up:

- **Capture Delay:** set the image capturing starting time when the device goes into video preview.
- **Upper Limit:** set the maximum screenshot storage capacity, when the capacity is reached the previous screenshots would be overwritten.
- **Call History**: select call history among four options: "**All**", "**Dialed**" "**Received**" "**Missed**" for the specific type of call log to be displayed.

22. Debug

22.1.System Log for Debugging

Capturing a System log for debugging

System log in the door phone can be used for debugging purpose. If you want to export the system out to a local PC or to a remote server for debugging , you can set up the function on the web **Upgrade > Diagnosis > System Log** interface.

system Log 🕜			
	LogLevel	7	• ?
	Export Log	🔒 Export	0
	Remote System Log Enabled		?
	Remote System Server		0

Parameter Set-up:

- Log Level: select log levels from 1 to 7 levels. You will be instructed by Akuvox technical staff about the specific log level to be entered for debugging purpose. The default log level is "3".the higher the level is, the more complete the log is.
- **Export Log**: click the **Export** tab to export temporary debug log file to a local PC.

- **Export Debug Log**: click the **Export** tab to export debug log file to a local PC.
- **Remote System Log**: select "**Enable**" or "**Disable**" if you wan to enable or disable the remote system log.
- **Remote System Server**: enter the remote server address to receive the the device And the remote server address will be provide by Akuvox technical support.

22.2. PCAP for Debugging

PCAP in Akuvox indoor monitor is used to capture the data package going in and out of the devices for debugging and troubleshooting purpose. You can set up the PCAP on the device web **Upgrade > Advanced > PCAP** interface properly before using it.

PCAP ⑦		
PCAP Specific Port		(1~65535) ⑦
PCAP	Start G Stop Export	0
PCAP Auto Refresh		0

Parameter set-up:

- **Specific Port**: select the specific ports from 1-65535 so that only the dat a packet from the specific port can be captured. You can leave the field bl ank by default.
- **PCAP**: click "**Start**" tab and "**Stop**" tab to capture the a certain range of d ata packets before clicking **Export** tab to export the data packets to you L ocal PC.
- PCAP Auto Refresh: select "Enable" or "Disable" to turn on or turn off the PCAP auto fresh function. If you set it as "Enable" then the PCAP will

continue to capture data packet even after the data packets reached its 50M maximum in capacity. If you set it as " **Disable**" the PCAP will stop data packet capturing when the data packet captured reaches the maximum capturing capacity of 1MB.

22.3. User Agent

User agent is used for the identification purpose when you are doing analysis on the SIP data packet. To do this configuration on web **Account > Advanced** interface.

X933 Administrator Guide

Q1: How to obtain IP address of X933

A1: You can use the display screen to get the IP information, just check the IP address at setting, basic info.

You can also use Akuvox IP Scanner to search Akuvox devices in the same LAN network.

Q2: Do Akuvox devices support Opus codec?

A2: For now, only Akuvox Android video IP phone R48G can support Opus audio codec. Door phone and indoor monitor still not supports.

Q3:What is the resolution of the 7 inch touch screen of X933?

A3: The ratio is 16:10, and resolution is 1280*800.

Q4:What operation system is X933?

A4:X933 based on Android 9.0.

Q5:Can I install apps at Akuvox indoor monitor?

A5:Akuvox have indoor monitor based on Linux system and Android system. For Linux system device (IT80/IT81/C312/C313 series), no possible to install third party app. For android system device(C315/C317/IT83/IT83/X933 series).You can install third party apps as your wish.

Q6:Can I connect electrical lock to indoor monitor?

A6:Akuox indoor monitor have relay component, so you can connect electrical lock to indoor monitor.

Q7:Can I communicate other indoor monitor with indoor monitor?

A7:Akuvox device can communicate with each other, no matter it is indoor monitor,door phone or ip phone. Of course indoor monitor can call to other indoor monitor, also if you want, you can set other indoor monitor as auto answer mode.
